<p><u>NOVELTY</u></p> <p>An ultrasonic laser apparatus for applying both atomized medicine and laser to human body, increasing the penetrability of medicine, and acting as 'light needle' for acupuncture is composed of ultrasonic atomizer comprising ultrasonic unit, liquid medium container and medicine cup, and the laser portion includes He-Ne laser source and laser transmission device including electric light diaphragm, movable beam splitter for transmission and reflecting, variable-light spot concave and convex lenses set, reflecting lens, optical fibre receiving convex lens and optical fibre and its head. Under control of programmed driver, said light diaphragm can make laser be output in strobe mode.</p> <p>(DwgNo.0/0)</p>	<p>CN 1143528-A</p>
